

# eTRM Launch Plan

**CAL TF STAFF**  
**SEPTEMBER 2019**

# Overview

2

- Summary of Benefits (Why eTRM?)
- Regulatory Context
- Regulatory Compliance
- Launch Plan: Key Milestones
- Launch Plan: Key Elements
- Benefits to CPUC
- Benefits to Third-party Implementers (3Ps)
- Responses to Staff Questions
- Open Issue: Ownership vs Control
- Supplemental Information

# Summary of Benefits (Why eTRM?)

3

## Centralized

- The eTRM is a single repository of all active deemed measures for the State of California
- Measures in the eTRM are available statewide, addressing all CZs
- Measures are available for IOU & POU portfolios (some are only POU approved and flagged as such)
- The eTRM houses all measure values, descriptions, and documentation linked to values they support in a cohesive way so “non-power users” can use it successfully

## Modernized

- The eTRM is an online relational database and does not require user to download software to use
- Shared values are updated in a single place then cascaded to all places in the database where that value is used
- All values associated with a measure are viewable together
- The eTRM interface is user friendly, easy to navigate, and visually appealing

## Transparent

- Calculations are displayed and clearly explained
- Inputs and assumptions are displayed with links to original supporting reference(s)
- Model assumptions and changes are displayed (except for DEER modeled measures)
- All cited references are stored in and can be viewed or downloaded from the eTRM library

## Accurate

- The centralized relational database enables utility and third party claimed savings to be automatically checked against approved deemed values
- The eTRM reduces errors and discrepancies by eliminating repetitive manual entry of the same value in multiple places and data transfers between multiple files
- Less entries equals less errors

# Summary of Benefits (Why eTRM?)

4

## Consistent

- Centralized measures – values, parameters, and descriptions of methods – facilitates standardization and consistency
- Uniformity of value tables, calculations, and measure characterizations enables more efficient review during measure development and utilization by users

## Efficient

- The eTRM is a single repository that can replace multiple, disparate resources: DEER, PRdb, WPA, READI, individual utility WP databases and the POU TRM
- The centralization results in more efficient measure development, updates, and review
- Efficiency results in time saved and therefore cost savings by all users

## Managed

- The workflow management functionality tracks measure development from start to regulatory approval
- The eTRM can track resources expended for measure development and updates
- Workflow management can help identify bottlenecks and enable process improvements

## Accessible

- All values, parameters, documentation, and descriptions of each approved measure are accessible to the public via the online interface
- Stakeholders/3Ps can have visibility into measure development and measure updating

## Scalable

- Additional policy directives can be incorporated easily and linked directly to measures (GHG/carbon reduction, water/energy, “embedded” EM&V)

# Regulatory Context

5

We direct the PAs to work with stakeholders to jointly investigate and propose potential solutions to Commission Staff **to improve the usability and transparency of all ex ante values**. The solutions may include **new software tools that offer a common platform for all PAs to compose savings estimates transparently and consistent with Commission direction**. Proposals should be focused on opportunities to **facilitate transparency and collaboration**. Proposals should specify the expected outcomes from the proposals and how they will improve the process to develop, review, and implement ex ante values. Any proposal must recognize that Commission staff is still responsible for review and approval of ex ante values and methods and that past and current ex ante guidance still pertains. [Emphasis added.]

(D.15-10-028, pp. 97 – 98)

# Regulatory Compliance

6

- Improve the usability and transparency of all ex ante values  
D.15-10-028, p. 97-98
- Tighter linkage between ex ante values, program tracking data, and ex post studies  
D.12-05-015, p. 359
- Statewide measures; measure standardization across the state  
D.12-05-015, p. 54  
D.05-01-055, p. 131  
Ex Ante Team 2018 Workpaper Guidance, p. 7
- Compilation of all Commission adopted ex ante energy savings into one website  
D.11-07-030, pp. 27 – 49

# Proposed Key Milestones

7

October 15, 2019

- eTRM launched to public and approved statewide measures are visible

October 15, 2019 -  
December 31, 2020

- Regulatory determination on whether eTRM should replace DEER as “Database of Record”
- eTRM “Phase 3 Enhancements” complete
- eTRM runs parallel to WPA, PEARdb, DEER, READi
- Testing and acceptance period for key stakeholders

January 1, 2021

- eTRM replaces DEER, PEARdb, WPA, READi
  - EAR maintains support tables in eTRM
  - EAR develops “draft” DEER measures in eTRM
  - EAR updates “DEER” measures in eTRM
  - EAR reviews utility measures and measure updates in eTRM.
  - eTRM is “Database of Record” for all Measures (DEER and non-DEER)
  - Utilities and 3P view & download measure information from eTRM
  - Measure information downloadable in form that is easy to upload into CET & run measure-level C/E tests (or direct link to CET)
- Annual eTRM Enhancement Process
  - Based on input from CPUC, CEC, IOUs, POUs, 3P-identified additional functionality and/or upgrades.

***Control** would be transitioned to CPUC Staff for measure regulatory approval, DEER measures, support tables, and measure publishing after CPUC approval. Cal TF Staff would retain control of “POU only” measures.*

# Key Elements: Regulatory

8

- Regulatory Strategy and Timing
  - Could be accomplished through either a Staff ruling or motion
  - Cal TF staff to work with ED Staff to execute their preferred regulatory path
- Timing of Commission Ruling
  - Need action by Q3 2020 to meet January 1, 2021 cut over

# Key Elements: Phase 3 eTRM Enhancements

9

- “Priority” Enhancements
  - Configurable security
  - Shared data library versioning process
  - Enhanced reporting capabilities
  - Enhanced workflow management
  - CET integration
- Other eTRM Enhancements

# Key Elements: Transitions

10

- CPUC Database Transitions
  - PRdb
  - EAdb
  - DEER
  - WPA
  - READI
- IOU Database Transition
  - Who, What, When
- 3P Database Transitions
  - Input from CEDMC and NAESCO

# Key Elements: Communications, Training & Support

## Communications & Training

- Measure Developers
  - 2020: Cal TF Staff enters measures to preserve integrity of eTRM
  - 2021: “Trained” measure developers enter measures and measure updates
- Measure Reviewers
- 3Ps

## Support

- Measure Developers
  - Cal TF Staff support and QA/QC review after measure developers trained
- Measure Reviewers, including Ex Ante Review team
  - Cal TF Staff support, after training
- 3Ps
  - E-mail with 24-hour response (during business days)
  - Follow-up phone call if necessary

# Benefits to CPUC Staff

12

## Increased WP Quality

- The eTRM Data Dictionary, range checking of values, and clear guidelines for measure development and measure QA/QC will increase quality of measures being developed or updated

## Efficiency

- A single relational database will replace multiple CPUC databases (PRdb, EAdb), file management system (WPA), and desktop software tool (READI)
- A single system will be easier to maintain/update
- The eTRM can easily adapt to new CPUC, CEC, and other State agency policy directives

## Transparency

- All supporting references gathered and linked to inputs and assumptions in one place
- Methodology and calculations are clear, concise, and consistent across “like” measures

## Stakeholder Collaboration

- All interested stakeholders can register to receive automated notifications of new measures or changes to measures they are interested in
- Notifications facilitate stakeholder engagement, collaboration, & accurate application of measures
- Affords opportunity for 3Ps to monitor and contribute to measure development and updating

## Compliance

- Additional measure-specific data collection requirements and other regulatory requirements can be linked to measures
- CPUC can use eTRM to automatically check utility savings claims and other measure parameters

# Benefits to 3Ps

13

*Third Parties will be designing and implementing 60% of the portfolio.  
Therefore, they should have an integral role in measure development and measure updates.*

## Visibility of Emerging Measures (prospective)

- Prospective application of eTRM could allow 3Ps to have early visibility into emerging measures
- Visibility of emerging measures would facilitate entry of emerging measures into program designs/portfolio
- Early visibility would speed measure development and maturity

## Visibility of Measures in Development

- Visibility of measure development will give 3Ps better knowledge of measures in development for current and future programs
- 3Ps can provide input as measures are developed

## Visibility into Measure Review

- Visibility into the measure review process and status will give 3Ps better knowledge of measure availability for current and future programs

## Stakeholder Collaboration

- All interested stakeholders can register to receive automated notifications of new measures or changes to measures they are interested in
- Notifications and increased visibility facilitate stakeholder collaboration

# CPUC Staff Questions

14

- Can eTRM replace DEER?
  - Can eTRM perform all functions that DEER can perform? (DEER is very complex . . .)
  - Is eTRM complete? (Does it have all current information in DEER?)
- What is the testing and acceptance plan in 2020 that will ensure key stakeholders could use output from eTRM?

# Can eTRM perform all functions that DEER can perform?

Function	DEER	eTRM	DEER/eTRM Comparison
Receive Submitted Workpapers	Measures submitted via WPA. No public access to WPA (CPUC review status). No public visibility of measure development and review.	Yes. Measures developed within eTRM directly. Can make “in progress” measures viewable by public (enhancement).	Current eTRM workflow management feature allows tracking of time and resources spent on measure development and review, as well as measure status.
View Measures (DEER & Non-DEER Measures)	Measures viewed via READI. READI contains all DEER measures, only some non-DEER measures. READI is not complete database of all deemed, approved measures. Key measure parameters not linked in READI.	Yes. All active measures (DEER and non-DEER) viewable through eTRM modern web interface. eTRM contains all values and information about a measure in a single, cohesive location.	In eTRM, 100% of approved, deemed active measures are viewable, including cost and implementation parameters. In contrast, READI does not contain cost, implementation parameters, or references.
Draft Updates to DEER Measures	PRdb	Yes. Measures can be updated/versioned in eTRM Measures are published when approved.	In eTRM, automatic stakeholder notifications keep interested parties informed of measure changes. Stakeholders can register to receive notifications for measures or technology categories they are interested in tracking.

# Can eTRM perform all functions that DEER can perform?

Function	DEER	eTRM	DEER/eTRM Comparison
Active DEER Measures	EAdb	Yes. All active DEER measures are in eTRM effective 1/1/20.	The eTRM is the repository for all active DEER and non-DEER measures. Cost and implementation data is stored for all measures in the eTRM.
Support for DEER Energy & Demand Impacts Values	Values exist throughout DEER and in MASControl (external software). Supporting documentation is not readily accessible. Some documentation missing.	Yes and No. eTRM does not contain the support for DEER energy savings and demand reduction values. (because they could not be found in DEER)	It would be very helpful to work with ex ante team to locate, identify, and link all support for DEER measures (particularly DEER energy & demand impacts) so DEER values are transparent and replicable.
Active DEER and Non-DEER Measures	DEERresources.net	Yes. All active measures are in eTRM.	Because of the eTRM relational database structure, DEER and non-DEER measures can be easily updated when support values change. In DEER, updating each measure is a manual and more laborious process.

# Can eTRM perform all functions that DEER can perform?

Function	DEER	eTRM	DEER/eTRM Comparison
References for DEER and non-DEER Measures	References are scattered throughout DEER. References not linked to values they support. Documentation for some DEER values/assumptions not identified.	Yes. eTRM includes a complete reference library for IOU measures, and all DEER references that could be located. All references linked directly to values they support in eTRM All references are hosted in eTRM reference library.	In eTRM, original DEER sources found and linked (to extent possible); References are available via the eTRM interface References also accessible via active links within the PDF to the eTRM library.
Shared Tables	PRdb	Current: Copies of shared tables in eTRM, but updated and maintained externally. Proposed: Move and maintain in the eTRM.	The relational nature of the eTRM facilitates efficient measure updates when a change has been made to a shared table.
Data for CET Analysis	No. Costs in EAdb are outdated, cannot link to CET calculator and get accurate results. Also, EAdb does not have all measures.	Yes. eTRM can also be used to create direct link to CET tool to automate C/E analysis.	eTRM facilitates easy CET analysis. Getting data out of DEER is manual, cannot be automatic, and is time-consuming and cumbersome.

# Can eTRM perform all functions that DEER can perform?

Function	DEER	eTRM	DEER/eTRM Comparison
Data for CPUC Staff Review of IOU Claims (particularly savings)	No. EAdb not complete (does not contain all measures and all measure parameters), so CPUC Staff cannot automate process to verify accuracy of savings claims.	Yes. eTRM contains all approved measures and stores savings and other key parameters for all measures, so staff could use eTRM to validate accuracy of utility savings claims and other measure parameters such as cost.	eTRM has an API that allows Staff to programmatically validate savings claims, costs, and other parameters against approved measure data.  Current DEER system does not support automated comparison of claims and other parameters against approved values. Must be done manually, so Staff is not currently able to validate accuracy of all savings, costs and other parameters in utility savings claims against approved deemed values.
MASControl & Other Calculation Tools (e.g., Water Heater Calculator)	No. Separate software – values imported to DEER.	No. Separate software – values imported to eTRM.	Cal TF Staff could work with Commission Staff to add MASControl references if they are made available.
Commission Rulings, Dispositions, Guidance, “What’s Happening”	Yes. Stored and accessible via DEERresources.com	No. Guidance will continue to reside on Commission website.	eTRM cites guidance for specific measures/values and Commission guidance stored in the eTRM reference library.  Regardless, the Commission would still host Commission guidance on its website (rulings, dispositions, etc.)

# Is eTRM complete?

## (Does it have all current information in DEER?)

Information	Examples	Add to eTRM?
Support tables	Interactive effects, EUL, NTG, GSIA, and many other parameter related lists.	Copies of support tables in eTRM. Currently, updated in PEAR db. However, support tables could be updated and maintained in eTRM.
Inactive DEER Measures	Measures not currently used by programs are not in the eTRM. However, when eTRM measures are “sunset” they will remain in the eTRM as “inactive” status.	No. Keep as historical archive in case someone needs it.
Support for DEER Energy Savings Values	Weighting tables, thermostat settings tables, building prototypes, “key word” changes from DEER base case to measure case.	Yes. In general, eTRM does not have support for DEER savings values (because they could not be found in DEER). We recommend working with the ex ante team to identify and link support for DEER measures in eTRM to provide transparency and reproducibility.
WP (for all active deemed measures, including those from DEER)	All WP used by IOU programs are measures in the eTRM. In other words, eTRM contains all active measures, DEER and non-DEER.	Yes. If any missing, can easily be added.

# Is eTRM complete? (Does it have all current information in DEER?)

Information	Examples	Add to eTRM?
Historic Information	Archived DEER Updates and ESPI postings.	No. Recommend that DEER be kept as historical archive.
Custom Related Data	DEER has link to custom ISP libraries, other guidance documents, and a few disposition abstracts.	Could be a future opportunity for the eTRM
IOU-specific Measure IDs	Implementation IDs, solution codes, product codes (codes are IOU-specific)	No. In eTRM, have SW measure offering IDs, which are appropriate for SW measures and SW program implementation. IOUs maintain their own cross reference between SW IDs and their IOU-specific measure IDs.

# Can eTRM Replace DEER?

21

## YES

- **eTRM** is a repository of all active deemed measures (DEER and non-DEER). eTRM is built as a modern relational database that will lead to reduced costs and improved measure updating, tracking, and C/E analysis. The eTRM will reduce errors and increase the Commission's ability to validate claims.
- **DEER** should be maintained as a historic archive and as the repository for Commission guidance and other Commission documents. The Commission will no longer need to maintain and update the DEER elements that would be replaced by eTRM if the eTRM becomes the "database of record."
- **MASControl** (which exists outside of DEER) will need to be maintained and updated.

# What is the Testing and Acceptance Plan?

22

- Cal TF Staff will implement Testing and Acceptance plan(s) in 2020 (prior to January 1, 2021).
- Testing and Acceptance will include the following key stakeholders:
  - CPUC: Including connection with CEDARs and CET
  - CPUC Group A Consultants
  - CEC
  - IOUs
  - POU's (LADWP, SMUD)
  - 3Ps (recruited through CEDMC)

# What is the Testing and Acceptance Plan?

23

- Purpose is to ensure that stakeholder requirements for using the eTRM are identified and met
- Cal TF Staff met with IOUs and LADWP to understand:
  - Databases/systems that need to integrate with the eTRM
  - Mechanism to upload eTRM measures into IOU systems
  - Level of automation available to support data transfers
  - Additional needs for eTRM development to support transition
- Cal TF developed proposal for integration with CEDARS and CET
- Draft plan will be presented to IOUs/POUs for comment then to the CPUC/CEC

# Open Issue: Ownership vs Control

24

- **Control: Staff/EAR Team can control specific data and measure approval**
  - Environment – AWS SLA
  - Software – Maintenance contract; Staff can direct updates
  - Data – eTRM security can allow only Staff/EAR to control specific data and certain functions (e.g. measure approval), plus full database can be downloaded and stored by Staff (or exported to CPUC server to run)
- **Ownership**
  - Current: 4 IOUs and SMUD/LADWP
  - Current ownership structure allows for efficient annual updates and enhancements identified by key stakeholders and the market
  - Regulatory staff (CPUC and CEC) can have priority decision-making regarding annual eTRM enhancements

# Appendix

25

- eTRM Post-training Survey Results (stakeholder input on eTRM)
- Finding a measure in eTRM vs. DEER (incl. measure parameters and measure references)
- DEER Shared Data (Support) Tables
- MASControl and DEER

# eTRM Post-Training Survey Results

# Contains Deemed Measure Information

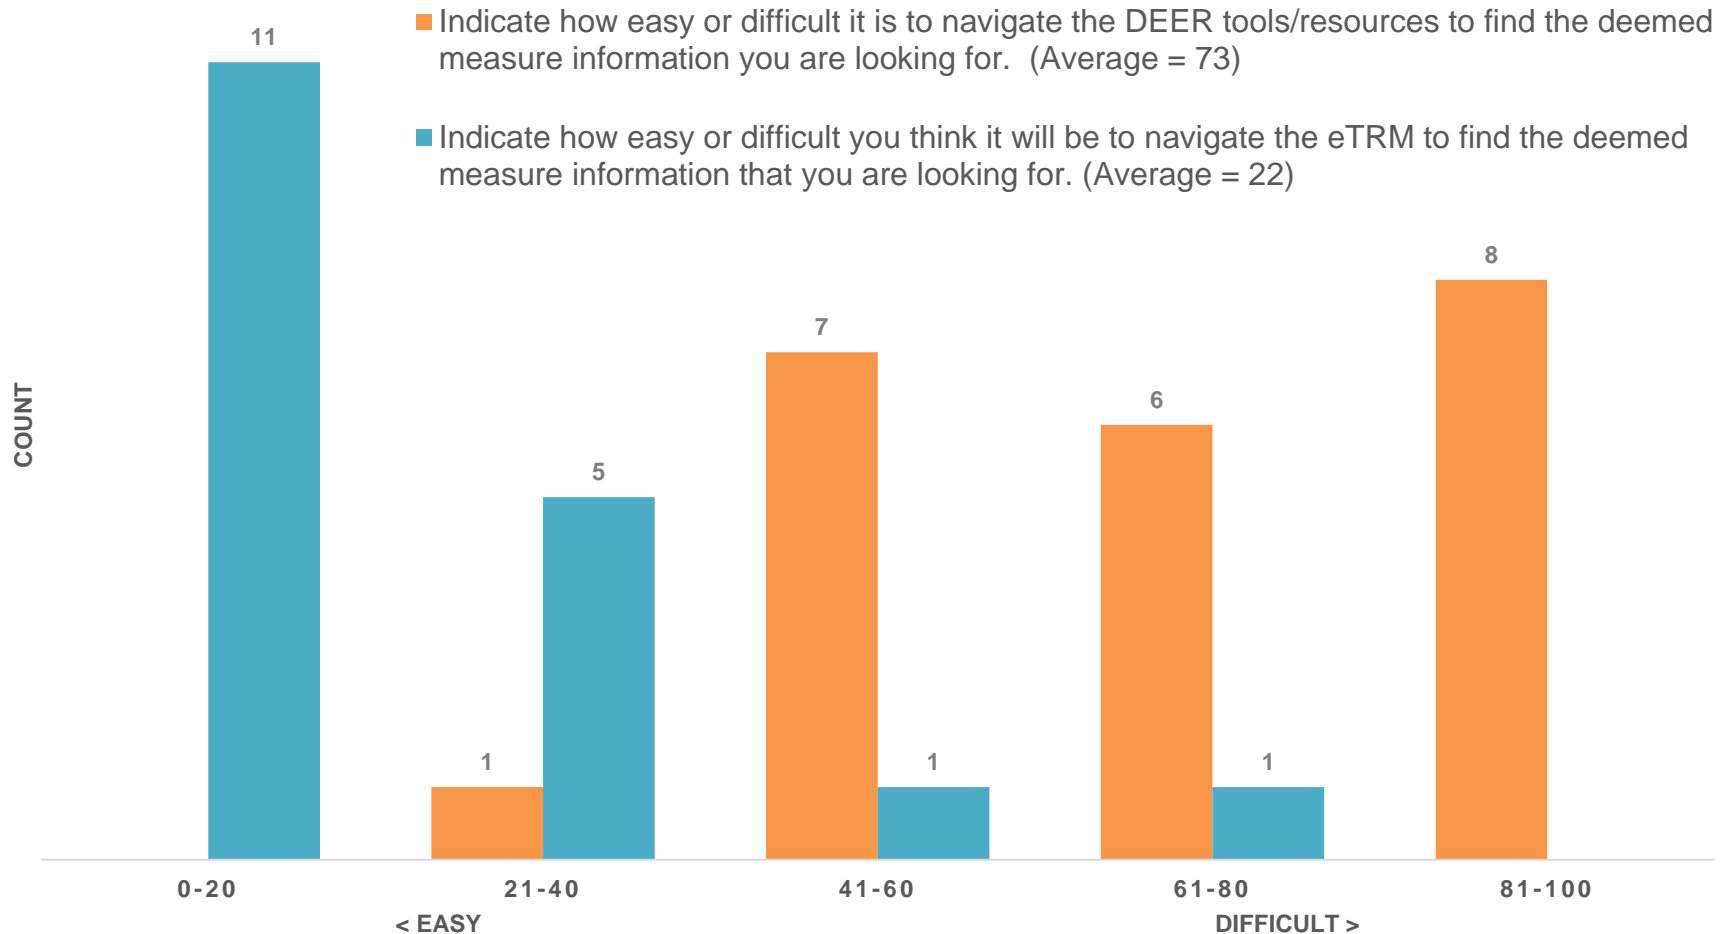

27

- The DEER tools/resources contain all the deemed measure information that I/my organization needs to design/implement programs. (Average = 50)
- The eTRM will contain the deemed measure information that I/my organization needs to design and/or implement programs in California. (Average = 17)

# Ease of Navigation

28

# DEER Verbatim Responses

**Comment on your overall experience using the DEER tools/resources. What features/aspects do you find useful? What features/aspects are not working well?**

- *Hard to navigate: difficult to search without knowing exactly what you're looking for in advance. Difficult to trace references.*
- *Work papers are confusing to navigate. Column headers are repetitive and make it unclear which values to utilize.*
- *User interface is absolutely terrible. Impossible to use without significant training. Not transparent, assumptions not clear, source information not clear. Does not inspire trust in the quality of the information.*
- *There is very minimal back-up documentation for DEER measures. For IOU measures the work papers are not consistent. Very tough / almost impossible to trace the rationale behind lot of DEER numbers/ assumptions.*

# eTRM Verbatim Responses

30

**Comment on the eTRM content and functionality. What features/aspects do you think will be useful? What additional features/aspects would you like to see?**

- *The design of the system looks great. Being able to follow citations easily, and see data tables will be very useful...*
- *Seeing the actual calc methodology is helpful.*
- *The reference tags/flags look like they will be useful.*
- *It looks fantastic from the training...I'd prefer to use this than the other DEER resources.*
- *Looks easy to use. Hoping to be able to integrate with other tools via the API to automate savings calculations.*
- *Central repository and CalTF's effort to source back-up documentation will help. I am assuming CalTF is going to do similar work on DEER measures which may not have IOU workpapers.*

# Finding a Measure in eTRM vs. DEER

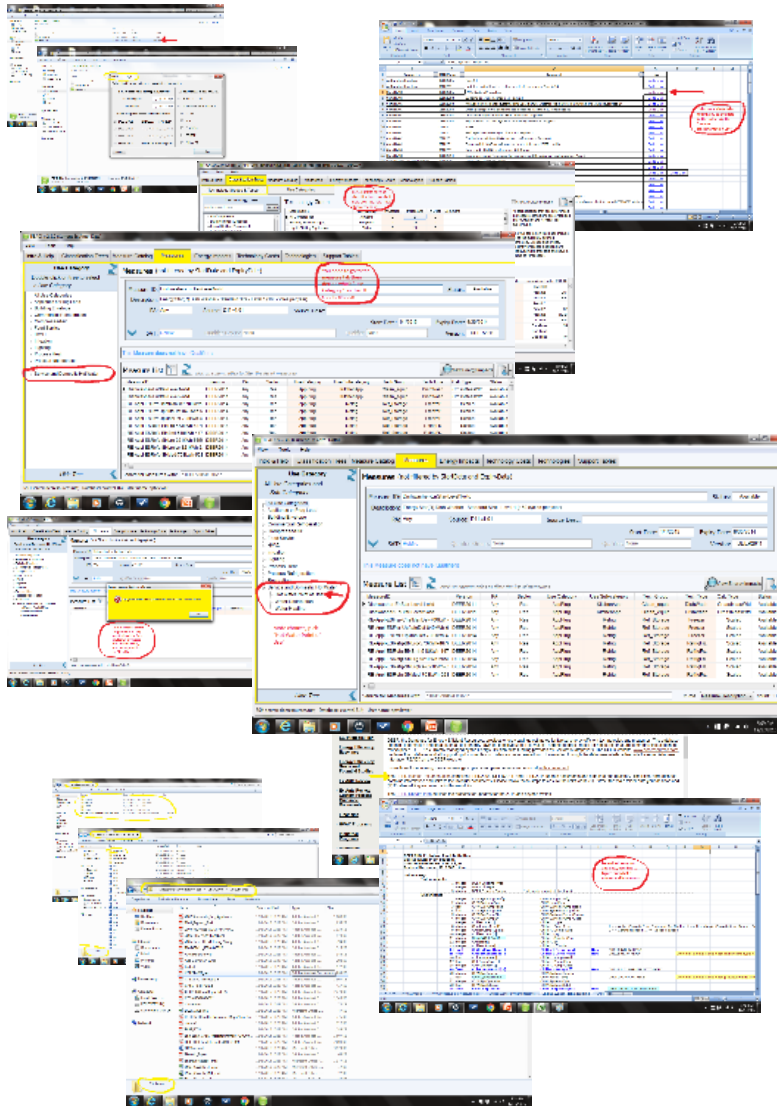

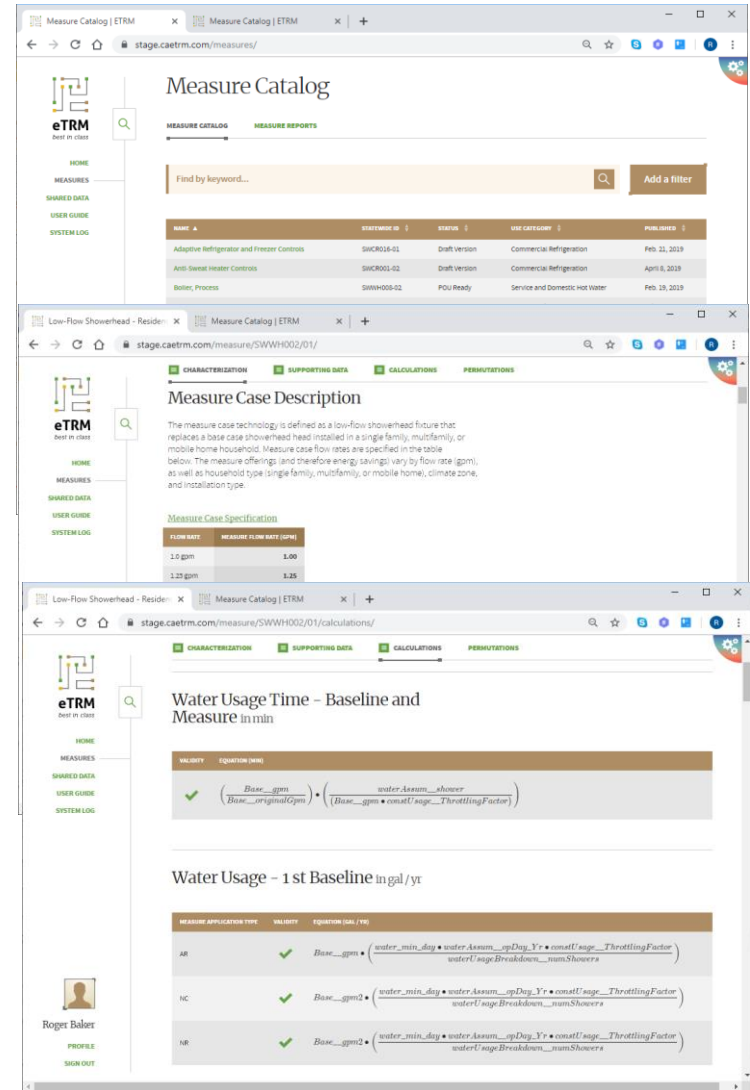

31

# Comparison

## DEER/READi

## eTRM

**Measure Catalog**

NAME	STARTDATE	STATUS	USE CATEGORY	PUBLISHED
Adaptive Refrigerator and Freezer Controls	SWCR004-01	Draft Version	Commercial Refrigeration	Feb 21, 2019
Anti-Sweat Heater Controls	SWCR003-02	Draft Version	Commercial Refrigeration	April 8, 2019
Boiler, Process	SWWH002-02	POU Ready	Service and Domestic Hot Water	Feb 19, 2019

**Measure Case Description**

The measure case technology is defined as a low-flow showerhead fixture that replaces a base case showerhead head installed in a single family, multifamily, or mobile home household. Measure case flow rates are specified in the table below. The measure offerings (and therefore energy savings) vary by flow rate (gpm), as well as household type (single family, multifamily, or mobile home), climate zone, and installation type.

FLOW RATE	MEASURE FLOW RATE (GPM)
1.0 gpm	1.00
1.25 gpm	1.25

**Water Usage Time - Baseline and Measure in min**

$$\checkmark \left( \frac{Base\_gpm}{Flow\_originalGpm} \right) \cdot \left( \frac{water\_Assum\_shower}{(Flow\_gpm \cdot constUsage\_ThrottlingFactor)} \right)$$

**Water Usage - 1st Baseline in gal / yr**

MEASURE APPLICATION TYPE	VALUITY	EQUATION (GAL / YR)
AR	✓	$Base\_gpm \cdot \left( \frac{water\_min\_day \cdot water\_Assum\_opDay\_Yr \cdot constUsage\_ThrottlingFactor}{waterUsageBreakdown\_numShowers} \right)$
HC	✓	$Base\_gpm2 \cdot \left( \frac{water\_min\_day \cdot water\_Assum\_opDay\_Yr \cdot constUsage\_ThrottlingFactor}{waterUsageBreakdown\_numShowers} \right)$
NR	✓	$Base\_gpm2 \cdot \left( \frac{water\_min\_day \cdot water\_Assum\_opDay\_Yr \cdot constUsage\_ThrottlingFactor}{waterUsageBreakdown\_numShowers} \right)$

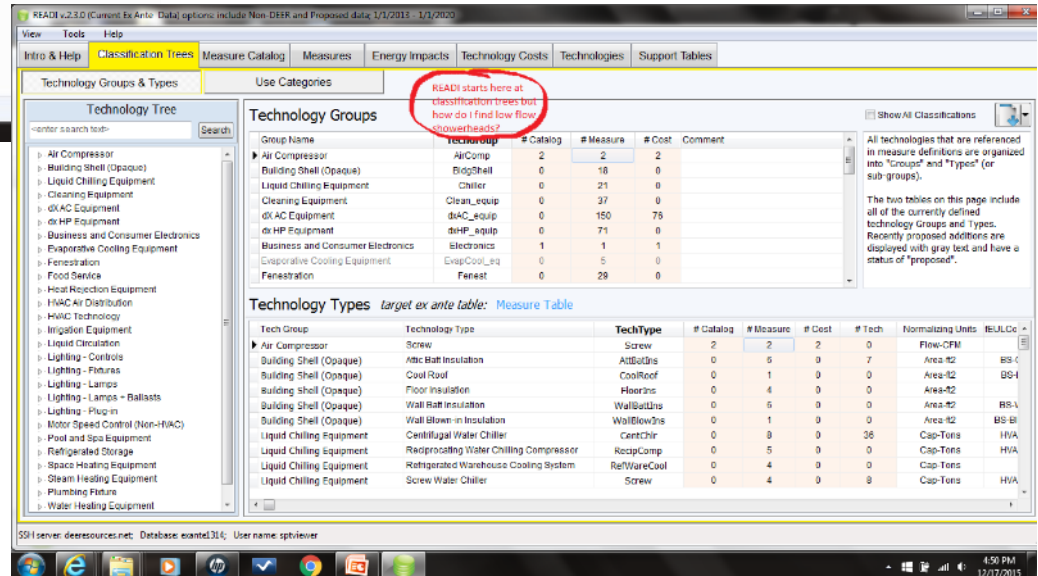

Roger Balser  
PROFILE

(e.g., showerhead)

Water restriction is achieved by using small nozzles (straightening vanes) that are shaped to keep turbulence from forming, preventing air from entering the flow. Flow is clear and transparent.

Key features of the LFR are straightening vanes and the prevention of bacteria development, noted below.

Comparison of LFR (left) and Aerator (right) Missing

## Base Case Description

The base case of a replace-on-burnout or new construction (ROB/NC) installation is defined as a low-flow showerhead that meets the maximum flow rate requirements of the California Appliance Efficiency Regulations (Title 20), effective July 1, 2018. (ER) installation was derived from a case of an early retirement California that measured existing

## Code Requirements

Applicable state and federal codes and standards for showerheads are specified in Table 3. The low-flow showerhead maximum flow rate was originally mandated by the Energy Policy Act of 1992. The California Appliance Efficiency Regulations (Title 20) effective in 1994 met the federal code and have exceeded it in subsequent updates.

### Applicable State and Federal Codes and Standards

Code	Applicable Code Reference	Effective Date
CA Appliance Efficiency Regulations - Title 20 (2016)	Section 1605.3, Table H-5: The maximum flow rate of a showerhead shall not be greater than 2.5 gpm at 80 psi.	Units manufactured on or after January 1, 1994 and prior to July 1, 2016.
	Section 1605.3, Table H-5: The maximum flow rate of a showerhead shall not be greater than 2.0 gpm at 80 psi.	Units manufactured on or after July 1, 2016 and prior to July 1, 2018.
	Section 1605.3, Table H-5: The maximum flow rate of a showerhead shall not be	Units manufactured on or after July 1, 2018.

# Comparison: Measure Documentation in eTRM

The screenshot displays the 'Calculations' tab for a measure in the eTRM system. The page is titled 'Low-Flow Showerhead - Resident' and shows the URL 'stage.caetrm.com/measure/SWWH002/01/calculations/'. The navigation menu includes 'HOME', 'MEASURES', 'SHARED DATA', 'USER GUIDE', and 'SYSTEM LOG'. The user profile for 'Roger Baker' is visible at the bottom left.

The main content area shows three calculation entries, each with a 'VALIDITY' column (marked with a green checkmark) and an 'EQUATION (GAL / YR)' or 'EQUATION (THERM / YR)' column.

**Water Savings in gal / yr**

VALIDITY	EQUATION (GAL / YR)
✓	$WU_{base1} - WU_{meas}$

**Annual UEC - Gas, 1st Baseline in therm / yr**

VALIDITY	EQUATION (THERM / YR)
✓	$\frac{WU_{base1} \bullet constWater\_Cp \bullet constWater\_weight \bullet (constWater\_mixedTemp - groundWater\_Temp)}{(CFac\_Btu\_therm \bullet constU\_sage\_EffGas)}$

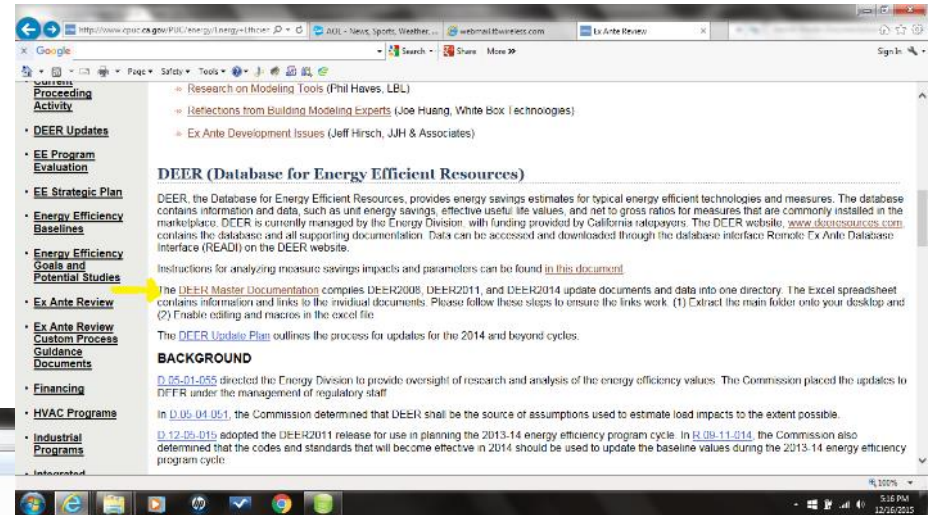

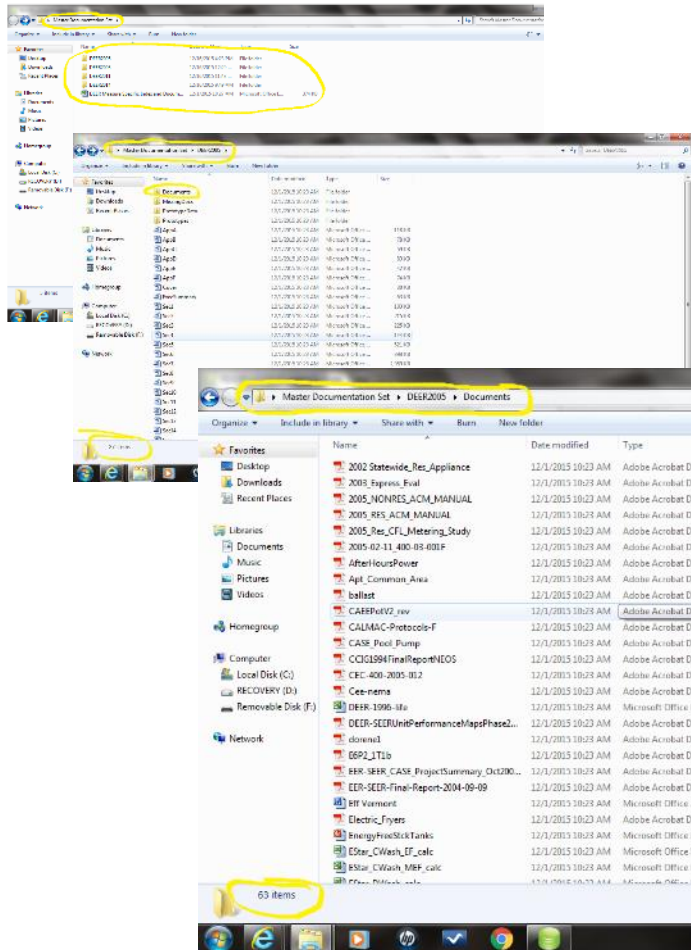

**Annual UEC - Gas, 2nd Baseline in therm / yr**

VALIDITY	EQUATION (THERM / YR)
✓	$\frac{WU_{base2} \bullet constWater\_Cp \bullet constWater\_weight \bullet (constWater\_mixedTemp - groundWater\_Temp)}{(CFac\_Btu\_therm \bullet constU\_sage\_EffGas)}$

**Annual UEC - Gas, Measure in therm / yr**

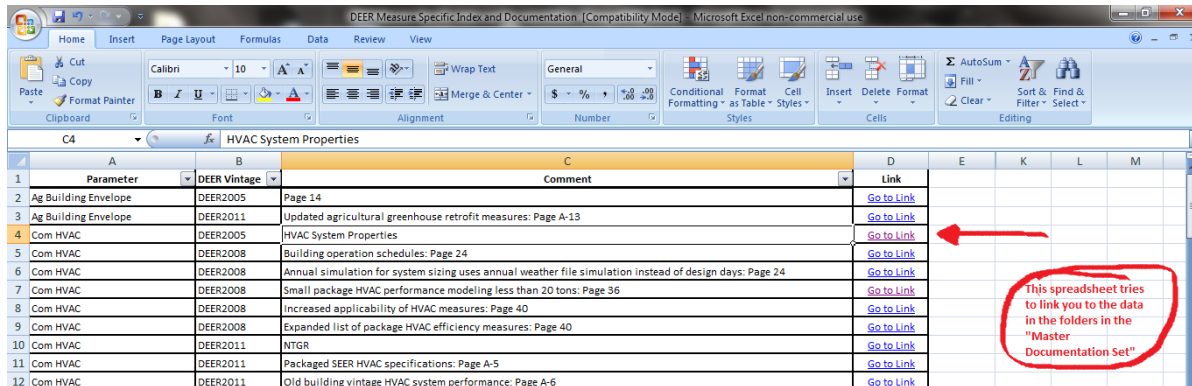

eTRM provides calculation methodology in transparent manner – the user can replicate the savings calculation to verify accuracy
